A transformant containing the recombinant vector can be used for preparing alpha-glucosidase by culturing the transformant and isolating alpha-glucosidase from the culture. This sequence represents a buckwheat alpha-glucosidase protein.

                                                                                        The invention relates to a recombinant vector containing alpha-glucosidase gene derived from buckwheat. A transformant containing the recombinant vector can be used for preparing alpha-glucosidase by culturing the transformant and isolating alpha-glucosidase from the culture. This sequence represents a buckwheat alpha-glucosidase protein.

This sequence represents a novel barley alpha-glucosidase protein. Recombinant alpha-glucosidase can be used to increase the rate of starch grain hydrolysis when used together with alpha-amylase or can supplement glucoamylase in industrial starch hydrolysis systems. Useful DNA sequence characteristics from this enzyme can be identified which can be used as hybridisation probes for identifying germplasm with high levels of efficient hydrolytic enzymes. encoding barley alpha-glucosidase protein - useful for producing ombinant protein to increase rate of starch grain hydrolysis when Claim 1; Col 21-26; 19pp; English. used with alpha amylase

New nucleic acid encoding potato alpha-glucosidase, used to produce transgenic plants that contain modified starch

Claim la; Page 5; 22pp; German.

This invention describes a novel potato alpha-glucosidase (I). (I) is used to produce transgenic plants (or plant or bacterial cells) that produce starch with modified degrees of branching, amylose/amylopectin ratio, phosphate content, starch granule size and/or sidechain structure, and thus altered physical and chemical properties. This starch is used for all usual applications, particularly in preparation of foods, packaging materials and disposable articles, but also for Mydrolysis to glucose (for manufacture in adhesives; for treating textiles; for soil stabilization; as wetting agent in plant protection and fertilizer compositions as binding agent in plant protection and fertilizer compositions as binding materials, leather and in casting; as flocculant for soil or coal slurries; and in polymers, as simple filler or reactive component, e.g. in polyweethane foams. Modified starch produced using plants that contain (I) are easily hydrolyzed, reducing the requirement for expensive enzymes. This sequence represents the potato alpha-glucosidase protein described in the method of the invention

The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (ABI992102 to ABI99212, encoding the protein sequences in ABBS7020 to ABBS7374) or by determining the expression profile of agene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition-improving drugs or therapeutics for ischaemic diseases. ABI99913 and ABI99914 represent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               137 RLENLSSTESGYTATLTRISP-TFFPKDVLTLQLEVLMETDSRLHFKIXDPASKRYEVPL 195

The protein preferably catalyses the glucose transfer of an alpha-1 right arrow 3 bond or the glucose transfer of an alpha-1 right arrow 3 and an alpha-1 right arrow bond to a sugar receptor by reacting with a substrate selected from starch and its decomposition

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA encoding truncated variants of Aspergillus glucosyltransferase is claimed. Deletion from the N- or C-terminal reduces GTase activity of the protein. Specifically, glucoamylase with reduced GTase activity can be prepared. The full-length GTase structural gene was isolated as a 4.3kb SphI fragment from chromosomal DNA of A.niger #499.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match 30.0%; Score 1423; DB 14; Length 985; Best Local Similarity 35.4%; Pred.                                                                                                                                                                                                                                                                                                                                                                                               Glycosyltransferase was prepared from a culture of A. niger containing recombinant DNA encoding GTase (AAQ50468). GTase can bobtained effectively using this method and in larger quantities. The probes (AAQ50466-67) were used to detect transformants containing the GTase gene.
                                                                                                                                                                                                                                                                                                            1. of glucosyl:transferase - using glucosyl:transferase gene
recombinant DNA of Aspergillus niger

The present sequence represents Endomyces fibuliger (also called Saccharomycopsis fibuligera) glucoamylase GLA2. The invention describes the recombinant GLA2 enzyme, which is useful for hydrolysing carbohydrate-containing materials, especially materials containing rice carbohydrates. The glucoamylase is used to produce glucose and alcohol from starch containing materials. GLA2 is useful for hydrolysing carbohydrate containing materials e.g. mixtures of a source of proteins and a source of carbohydrates, especially a mixture of leguminous plant or of a cooked oleaginous plant and of a cooked or roasted cereal source e.g. a mixture of soya or cooked beans and of cooked or roasted wheat or

New proteins that bind specifically to receptors in the gastro-intestinal tract and related nucleic acid - chimaeras and antibodies, used to deliver therapeutic or diagnostic agents to, or through, the gastrointestinal tract, e.g. insulin or leuprolide

Disclosure; Fig 3; 294pp; English

```
peptide-associated transporter (HPTI), hPEPTI, D2H and human sucrose-isomaltase complex (hSI). (I) provide active transport of therapeutic agents through human and animal GI tissue (into the blood) for in vivo delivery, particularly for treatment or prevention of hypertension, diabetes, osteoporosis, haemophila, anaemia, cancer, migraine, or angian pectoris. Specifically they are used to deliver insulin or leuprolide, but many other guitable therapeutic agents are disclosed, including genes or inhibitory nucleic acid, imaging agents and antension. (I) may also provide targeting to the GI tract. Other uses of (I) are: (i) to determine the level of specified receptors in a sample (ii) a binding assay); and (iii) to screen for molecules that bind (I). Immunogenic analogues or derivatives of (I) are used to raise antibodies and in immunoassays. The antibodies are used to locate, detect and measure (I), e.g. for imaging, monitoring treatment, tissue analysis etc., also for peptide purification and immobilisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                21;

CDX1 or CDX2 (transcription factors). Expression of these markers indicates possible presence of the specified cancer cells. The method is used to diagnose (or monitor) metastatic colorectal cancer or primary and/or metastatic stomach or oesophageal cancer cells, also to confirm identification of such cells. These cancers can be treated by administration of an SI ligand and (optionally conjugated) sytostatic agent or radioimaged by administering a conjugate of the SI ligand and detectable agent.                                                                                                                                                                                                                                                                                                a
                                                                                                                                                                                                                                                                                                                              ઠે
                                                                                                                                                                                                                                                                                                                                                         a
                                                                                                                                                                                                             The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and canno acid sequences. Agglonolo Agglosial represent novel human amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      207

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Aspergillus oryzae contains two novel enhancer elements: one (designated "enhancer-B") corresponds to the consensus sequence (CGANATTTA and the other (designated "enhancer-C") is of sequence CCAATCAGCAT. By inserting at least one of the enhancer elements into a promoter region which is functional in fungi, the activity of the promoter is enhanced. Using such improved promoters, a gene of interest can be expressed efficiently in transformed fungi.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Fungal DNA enhancer element - used to transform other host fungus e.g Aspergillus oryzae, to produce large quantities of a gene product
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Fungus; fungal; enhancer element; promoter; recombinant protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The promoter region of the alpha-glucosidase (agdA) gene of

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 19,

Thereof, and Uses Thereof
Sequence 1, Application US/09557884

Patent No. 6506581

GENERAL INFORMATION:

APPLICANT: Fleischmann et al.

TITLE OF INVENTION: The Nucleotide sequence of the Haemophilus influenzae Rd Genome, Fragments Thereof, and Uses Thereof
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match 62.1%; Score 18; DB 4; Length 1830121; Best Local Similarity 80.8%; Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                    30-JUN-
   ò
                                                                                            This cDNA sequence encodes a novel barley alpha-glucosidase protein. Recombinant alpha-glucosidase can be used to increase the rate of starch grain hydrolysis when used together with alpha-amylase or can supplement glucoamylase in industrial starch hydrolysis systems. Useful DNA sequence characteristics from this enzyme can be identified which can be used as hybridisation probes for identifying germplasm with high levels of efficient hydrolytic enzymes.
                                                                                                                                                                                                               Gaps
                                     DNA encoding barley alpha-glucosidase protein - useful for producing recombinant protein to increase rate of starch grain hydrolysis when used with alpha amylase
                                                                                                                                                                                                                                                                                                                                                                            Hybridisation assay, genetic mapping, gene expression control, protein identification; signal transduction pathway, metabolic pathway, promoter; termination sequence; ss.

The polypeptides have a characteristic extracellular structure including lectin-binding, olfactomedin-like and mucin-like domains. Modulator compounds that inhibit the binding of lectomedin to a binding partner (galectin-3) may be used to treat conditions such as atheroselerosis, restenosis, vascular disease, peripheral neuropathy, cancer, nerve regeneration, and pathologies of the renal cystic epithelia and uterine implantation. Nucleoride sequences encoding the lectomedin polypeptides are useful in gene therapy. The lectomedin polymucleotides and polypeptides may be used to identify lectomedin binding partner compounds. The polynucleotides are useful for detecting lectomedin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; lectomedin; seven transmembrane receptor protein; antiatherosclerotic; vasotropic; cytostatic; gene therapy; atherosclerosis; restenosis; vascular disease; peripheral neuropathy; cancer; nerve regeneration; renal cystic epithelium; uterine implantation; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Isolated human seven transmembrane receptor lectomedin polypeptide or its fragment, useful for identifying agents which can treat atherosclerosis, restenosis or vascular disease -

The present cDNA sequence was obtained and used in a procedure for the isolation of human seven transmembrane receptor lectomedin polypeptides. The polypeptides have a characteristic extracellular structure including lectin-binding, olfactomedin-like and mucin-like domains. Modulator compounds that inhibit the binding of lectomedin to a binding partner (galectin-3) may be used to treat conditions such as atheroscierosis, restenosis, vascular disease, peripheral neuropathy, carcer, nerve regeneration, and pathologies of the renal cystic epithelia and uterine implantation. Nucleotide sequences encoding the lectomedin polypeptides are useful in gene therapy. The lectomedin polynucleotides and polypeptides may be used to identify lectomedin binding partner compounds. The polynucleotides are useful for detecting lectomedin compounds. The polynucleotides are useful for detecting lectomedin ectomedin genes. Antisense lectomedin nucleic acids are able to inhibit expression of lectomedin genes.
                                                                                                                                                               o,
expression in cells and for identifying genetic mutations in the lectomedin genes. Antisense lectomedin nucleic acids are able to inhibit expression of lectomedin genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Isolated human seven transmembrane receptor lectomedin polypeptide or
its fragment, useful for identifying agents which can treat
atherosclerosis, restenosis or vascular disease -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human, lectomedin, seven transmembrane receptor protein, antiatherosclerotic; vasotropic; cytostatic; gene therapy; atherosclerosis; restenosis; vascular disease; peripheral neuropathy; cancer; nerve regeneration; renal cystic epithelium; uterine implantation; ss.

The invention provides G protein (quanine nucleotide binding protein) -conjugated receptor proteins (AAY7727-29) expressed in brain tissue and nucleic acids (AAZ87683-685) expressed in brain tissue polypeptides and the methods are useful for identifying compounds which are agonists or antagonists to the binding of the receptor to its ligand, for use as drugs. DNA encoding all or part of the polypeptides is used for the diagnosis of diseases and in gene therapy, and for the production of transgenic animals for use as disease models. Antibodies recognizing the receptor proteins or their fragments are also useful for disease diagnosis. The present sequence represents a DNA encoding the G
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New G protein conjugated receptor protein expressed in brain tissue for screening potential agonists and antagonists of its binding to ligands

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention provides purified and isolated human 7-transmembrane receptor lectomedin polypeptide or its fragments. The lectomedin polypeptide or its fragments. The lectomedin polypeptide comprises extracellular lectin-binding, olfactomedin-like polypeptide can be produced by standard recombinant methodology. The polypeptide can be produced by standard recombinant methodology. The polypeptide is involved in cellular adhesion and qytoplasmic metabolic pathways that are modulared by extracellular signaling. Specific binding to lectomedin-l expressed on smooth muscle cells may be required for probletaration of these cells in atherosclerosis. The polypeptide is used to raise specific antibodies, and to identify specific binding agents that modulare (increase or of probes and primers, and of therapeutic antisense, ribozyme or triplexforming agents, and in gene therapy to restore deficient lectomedin forming agents, and in gene therapy to restore deficient lectomedin cativity. Specific binding agents of lectomedin are are used for treating diseases that involve lectomedin activity, e.g. vascular diseases such as the present sequence represents the DNA encoding human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ·.

isolation of human seven transmembrane receptor lectomedin polypeptides. The polypeptides have a characteristic extracellular structure including lectin-binding, olfactomedin-like and mucin-like domains. Modulator compounds that inhibit the binding of lectomedin to a binding partner (galectin-3) may be used to treat conditions such as atherosclerosis, restenosis, vascular disease, peripheral neuropathy, cancer, nerve regeneration, and pathologies of the renal cystic epithelia and uterine implantation. Nucleotide sequences encoding the lectomedin polypeptides are useful in gene therapy. The lectomedin polymucleotides and polypeptides may be used to identify lectomedin binding partner compounds. The polymucleotides are useful for detecting lectomedin compounds. The lactomedin for identifying genetic mutations in the lectomedin genes. Antisense lectomedin nucleic acids are able to inhibit expression of lectomedin genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present cDNA sequence was obtained and used in a procedure for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Isolated human seven transmembrane receptor lectomedin polypeptide or its fragment, useful for identifying agents which can treat atherosclerosis, restenosis or vascular disease -
antiatherosclerotic; vasotropic; cytostatic; gene therapy; atherosclerosis; restenosis; vascular disease; peripheral neuropathy; cancer; nerve regeneration; renal cystic epithelium;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; lectomedin; seven transmembrane receptor protein; antiatherosclerotic; vasotropic; cytostatic; gene therapy; atherosclerosis; restenosis; vascular disease; peripheral neuropathy; cancer; nerve regeneration; renal cystic epithelium; uterine implantation; ss.

The present cDNA sequence was obtained and used in a procedure for the isolation of human seven transmembrane receptor lectomedin polypeptides. The polypeptides have a characteristic extracellular structure including lectin-binding, olfactomedin-like and mucin-like domains. Modulator compounds that inhibit the binding of lectomedin to a binding partner (galectin-a) may be used to treat conditions such as atheroscierosis, restenosis, vascular disease, peripheral neuropathy, cancer, nerve regeneration, and pathologies of the renal cystic epithelia and ucerine implantation. Nucleotide sequences encoding the lectomedin polypeptides or useful in gene therapy. The lectomedin binding partner compounds. The polynucleotides are useful for detecting lectomedin compounds. The polynucleotides are useful for detecting lectomedin extreme compounds. The polynucleotides are useful for detecting lectomedin certomedin genes. Antisense lectomedin nucleic acids are able to inhibit expression of lectomedin genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .

The invention provides G protein (guanine nucleotide binding protein) conjugated receptor proteins (AAY7727-29) expressed in brain tissue and nucleic acids (AAZ87683-685) encoding the polypeptides. The polypeptides and the methods are useful for identifying compounds which are agonists or antagonists to the binding of the receptor to its ligand, for use as drugs. DNA encoding all or part of the polypeptides is used for the diagnosis of diseases and in gene therapy, and for the production of transgenic animals for use as disease models. Antibodies recognizing the receptor proteins or their fragments are also useful for disease diagnosis. The present sequence represents a DNA related to the G
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       G protein-coupled receptor; GFCR; antigenic peptide; gene therapy; G protein-coupled receptor modulator; antibody; immune-related disease; growth-related disease; cell regeneration-related disease; AIDS; cancer; immunological-related cell proliferative disease; autoimmune disease; Alzheimer's disease; atherosclerosis; infection; osteoarthritis; allergy; osteoporosis; cardiomyopathy; inflammation; Crohn's disease; diabetes; graft versus host disease; Parkinson's disease; multiple sclerosis; pain; psoriasis; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; obesity; nausea; hypertension; hypotension; renal disorder; rheumatoid arthritis; trauma; ulcer; gene; ds.
                                                                                                                                                                            New G protein conjugated receptor protein expressed in brain tissue for screening potential agonists and antagonists of its binding to ligands
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

The present invention describes antigenic peptides (1) comprising:

(a) any one of 1601 sequences (see ABP82019 to ABP88619) of 12-24 amino acids. Also described: (1) an assay for the detection of a particular of protein-coupled receptor (GPCR) or a candidate polypeptide in a sample, and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (1) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the greence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ostecarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host disease. Parkinson's disease, multiple sclerosis, pain, psoriasis, anxiety, depression, schizophrenia, dementia, mental retardation, memory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          loss, epilepsy, asthma, tuberculosis, obesity, massea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis. ABZ42523 to ABZ42869 encode GPCR proteins given in ABP81675 to ABP82018, which are used in the exemplification of the present invention.
New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     treating immune-related diseases, growth-related diseases, cell regeneration-related disease, immunological-related deal probliferative diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, atherosclerosis, bacterial, fungal, protozoan or viral infections,
                                                                                                                                                                                                                                                                                                                      Disclosure; Fig 1; 523pp; English.
                                                                                                                                                                                        cancer or autoimmune diseases

The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primers for detecting one or more used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaeal, bacterial, fungal and parasites, for universal detection and for specific and ubiquitous detection and identification of an algal, archaeal, bacterial, fungal and parasitical species, genus, family and group. A nucleic acid (I) obtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin gene. haxA nucleic acids are used for the specific and ubiquitous detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, Mycobacteriaceae family, Resudomands group, Streptococus sp., Neisseria gonorrhoeae and Staphylococus sp., Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 represent nucleotide sequences and primers/probes Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal, bacterial, fungal and parasitical species in a test sample -Gaps Ouellette M; which are given in the exemplification of the present invention. .; 0 Sequence 764 BP; 159 A; 260 C; 184 G; 160 T; 1 other; Boissinot M, Huletsky A, Menard C, Claim 24; Page 1102-1103; 1580pp; English.                                                                                                                                                                                                                                                         The present sequence represents a partial CDNA sequence from an example of the present invention, which partially encodes an active vaccine component or allargen derived from Candida albicans. The present invention describes fungal antigens, comprising the insoluble fraction of fungal cells having completely/partially removed cell walls. Also described are nucleic acids encoding the antigens and a method for producing the antigens. The antigens can be used for preparing therapeutic compositions for stimulating immune response, e.g. as a vaccine. They can be used for treatment of fungal infections, treatment and prevention of allergies and diagnosis of fungal infections in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Constructing strains for identifying gene products as effective targets
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

cells in which both alleles of a gene are modified, comprising modifying one allele by insertion or replacement by a cassette having an expressible selectable marker and modifying other allele by comprising modifying or expressible selectable marker and modifying other allele by recombination, of a promoter replacement fragment with a heterologous promoter. (M.) is useful for constructing a strain of diploid fungal cells in which both alleles modified are useful for identifying a gene that cells in which both alleles modified are useful for identifying a gene that contributes to the virulence and/or pathogenicity of a fungus, a gene that contributes to the virulence and/or pathogenicity of a fungus a gene to that contributes to the resistance of a diploid fungus to an antifungal agent, an antifungal agent for itentifying a characterity of a fungus to an antifungal agent, an inhibits the growth of a diploid fungus of agent, an antifungal agent for itentment of a mammalian disease. (MI) is useful for identifying a compound which modulates the activity of a gene product, preferably enzymatic activity, carbon compound catabolism, biosynthetic, transporter, transcriptional, transporter, preferably enzymatic activity. The method is useful for identifying a compound having the activity. The method is useful for identifying a compound having the continity to inhibit growth or proliferation of C. albicans. The present sequence is that of an essential Candida albicans gene used in the method of the invention.

The present invention describes fungal antigens, comprising the insoluble fraction of fungal cells having completely/partially removed cell walls. Also described are nucleic acids encoding the antigens and a method for producing the antigens. The antigens can be used for preparing producing the antigens for stimulating immune response, e.g. as a vaccine. They can be used for treatment of fungal infections, treatment and prevention of allergies and diagnosis of fungal infections in vertebrates. The vaccines are not live, and have low toxicity.
                                                                                                                                                                                                           Fungal antigens comprising insoluble fraction of fungal cells useful for, e.g. stimulating immune response and treatment and diagnosis of fungal infection(8)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1750 BP; 578 A; 315 C; 354 G; 503 T; 0 other;

Human RS3 protein and encoded polynucleotide, applicable in diagnosis and treatment of malignant neoplasm, haemopathy, human immunodeficiency virus infection, immunological diseases and inflammation

Example 7; Page 20; 34pp; Chinese.

The present invention provides the protein and coding sequences of human RS3 protein. The sequences can be used in the treatment of cancer, haemopathy, HIV infection, immunological diseases and inflammation. The

present sequence is a probe for the coding sequence of the invention. Gaps .; 0 Length 41; 5; Indels 65.5%; Score 19; DB 22; 81.5%; Pred. Direct Submission

Submitted (28-JAM-2001) Sanger Centre, Hinxton, Cambridgeshire,
CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
crqueets: clonerquest@sanger.ac.uk
on Jan 28, 2001 this sequence version replaced gi:12580980.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequence with
only a small overlap as described above.

This sequence has been finished according to sequence map criteria
as follows. An attempt is made to resolve all sequencing problems,
such as compressions and repeats, but not necessarily within known
annotated repeat sequence elements. Where the sequence is
ambiguous, there is an annotation using the 'unsure' feature key.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em: EMBL; Sww; SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence
dromosome 9, constructed by the Sanger centre Chromosome 9 Mapping
Group.
Further information can be found at
http://www.sanger.ac.uk/HGP/Chr9
RPI1-575C20 is from the library RPCI-11.2 constructed by the group
of Pieter de Jong. Four further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AL353741 199517 bp DNA linear PRI 28-JAN-2001 Human DNA sequence from clone RP11-575C20 on chromosome 9, complete

Direct Submission

Submitted (12-OCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Oct 12, 2002 this sequence version replaced gi:21747363.

The Sequence in this sassembly is a combination of BAC based reads and whole genome shorgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the Atlas assembly (a 'contig-scaffold'). Within each contig scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated state. The sequence contigs within a contig-scaffold that consist entirely of whole genome shorgun sequence reads. Both end sequences and whole genome shorgun sequence reads. Both end sequences and whole genome shorgun sequence reads. Both end sequences and whole genome shorgun sequence reads.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     * NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft_data.html).

* NOTE: This is a "working draft' sequence. It currently

* consists of I contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces
